This document provides you with the key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

Assenagon Alpha Volatility (I2 GBP)

ISIN: LU1864491771, WKN: A2N5MP

Unit class (I2 GBP) of Assenagon Alpha Volatility (the "Fund"), sub-fund of the Assenagon Alpha umbrella fund. Assenagon Asset Management S.A., an authorised UCITS management company, acts as Management Company of the Fund. This Fund is authorised and regulated in Luxembourg by the Commission de Surveillance du Secteur Financier.

OBJECTIVES AND INVESTMENT POLICY

The Fund aims to generate medium to long-term growth while tolerating short-term fluctuations in value. Particularly in market phases with increased volatility, the fund aims for an increase in value. The Fund is actively managed without investments being limited to a specific benchmark universe. All income remains in the Fund and increases the value of the units.

In order to achieve its investment objective, the fund relies on a combination of volatility strategies, most of which are implemented using derivatives, and a base portfolio. The volatility strategies make use of relative price differences in different volatility segments. Potential price and currency risks can be hedged through futures contracts. The Fund's base portfolio is aimed to achieve a near-money-market return. Depending on market phases and identified opportunities for investment strategies, between 0% and 100% can be invested in the base portfolio. The fund primarily uses derivatives to implement its investment strategy. The following are used in particular: Swaps, options, forwards and futures, on individual securities, baskets of individual securities, indices and derived variables such as interest rates, volatility or variance. Derivatives can be used both for investment and hedging purposes. The use of derivatives can

create a leverage effect in the Fund. Portfolio Management may also use equities, certificates, time and demand deposits, currency transactions, units of other UCIs and UCITS, and bonds issued by industrial enterprises, sovereigns and other debtors as investment instruments. Bonds have a minimum rating of BBB- according to Standard & Poor's and Fitch or Baa3 according to Moody's. If the currency of a unit class differs from the Fund's currency, the Fund employs foreign exchange derivatives to compensate the exchange rate risk between unit class currency and fund currency. Within the framework of the investment policy, the Portfolio Management may use other permitted investment instruments.

The Fund's currency is the EUR, the reference currency of this unit class (I2 GBP) is GBP.

Fund units can be written and redeemed on each valuation date. The management company can suspend the redemption of units if this is necessary due to exceptional circumstances, taking investor interests into account.

Recommendation: This Fund may not be appropriate for investors who plan to withdraw their money within two to three years.

RISK AND REWARD PROFILE

The indicator is based on historical data. It is not a reliable guide to the future risk profile of the Fund. The classification of the Fund may change in the future and does not represent a guarantee. Even a fund classified in category 1 does not represent a completely risk-free investment.

Why is the Fund in this category?

The Fund is classified in category 6 because its share price fluctuates strongly and for this reason the earnings opportunities, but also the risk of loss, can be high.

A detailed presentation is available in the "General information on risk" section of the prospectus. When the Fund is classified, it is possible that due to the calculation model, not all of the risks are taken into account. That includes the following risks, that can be relevant nevertheless.

- **Risk related to derivatives:** The Fund may use derivatives for investment and hedging purposes. The use of derivatives results in increased leverage within the Fund that may lead to an increase in the variability of the Fund's net asset value. The use for investment purposes may increase opportunities and risk of loss. The use for hedging may reduce return opportunities.
- **Default risk:** The Fund may invest in non-exchange-traded derivative contracts ("OTC derivatives transactions"). Counterparty default risk may arise, if an entity with which the Fund interacts becomes unwilling or unable to meet its obligation. It can be reduced by the party to the OTC agreement pledging liquid collateral in favour of the Fund.
- **Operational risks and risks related to safekeeping:** The Fund may fall victim to fraud or other criminal activity. It can suffer losses through misunderstandings or errors by staff of the management company or third parties. Furthermore, the Fund may be harmed by external events, e.g. natural disasters.
- **Liquidity risk:** The Fund may invest in securities which, depending on market conditions, could become hard to value or sell at a desired time and price.
